

NEW: Barcode and RFID scanner with real USB stick functionality

Cologne (Germany), May 4, 2009 / The handheld RFID and Barcode scanner series SCANN DY and smartSCANN DY of the Cologne (Germany) based company PANMOBIL are the world's only barcode and RFID scanner, which has the advantages of a real USB-stick.

To get the collected data out of a scanning device into the enterprise system, until today, did need to install drivers or software on the enterprise system.

With the new PANMOBIL USB stick functionality no installations are needed, even the assistance of an administrator belongs to the past.

Just plug in the SCANN DY family scanning device to the USB-port of your computer, or the forklift terminals or other devices. The scanned data can then directly be processed into Microsoft Excel, Word or other programs. The Data file is available for your enterprise system in the same way as any file on your Hard disk or external storage device.

The USB stick function - the easiest way to transmit data - makes work more fail-safe and easily, a great help for the operating personnel.

1 D & 2 D Barcode and RFID-Data can be saved with any additional data/time and can be compared with any uploaded reference data because of the free programmability and the memory size of up to 8G Byte. The high-Tec camera of

SCANNDY and smartSCANNDY can read up to 30,000 scans in a sequence of 4 seconds pulse with only one battery charge. smartSCANNDY and SCANNDY can also be easily configured to use the internal TCP/IP Protocol interface, which enables the SCANNDY family to be addressed and direct available all over the world without any additional installation.

ON top, SCANNDY and smartSCANNDY are available in various versions, which can also transmit data via Bluetooth, USB COM, HID, USB Ethernet or Easy-Batch, i.e. synchronizing data automatically.

Owing to its robust soft rubber body smartSCANNDY is ideal for the usage in warehouses and in the strong field of logistics. As it is so easy to work with the SCANNDY family, it further can be used for a great number of tasks, including complex operations in health care, production or transportation.
